

# Super Micro Flowmate FLOWMATE ( M-III)

GENERAL SPECIFICATION  
GS.No.GBB340-8-E

## ■ GENERAL

Designed for monitoring fuel consumption of combustion appliances and heaters or elsewhere where small flow measurement is desired, the FLOWMATE ( M-III) is a compactly built liquid service flowmeter dedicated to remote control with a pulse generator. Meter size 38 (resin body) intended for water and pure water applications is a new addition to this series, expanding the application range for small flow metering.

Super Micro 39

## ■ FEATURES

1. Compact configuration with built-in pulse generator.
2. Simple and firm construction. Inexpensive.
3. Remote totalizing counter displays actual throughput of flow to be utilized for monitoring and controlling of fuel consumption in various types of instruments.
4. Multiple flow control systems can be made-up being combined with versatile flow control elements such as pump and valves, i.e: proportional injection of additives in fine chemical processes.
5. Ideal for fuel cell applications or other low to micro flow measurement.
